B TECH

(SEM-VI) THEORY EXAMINATION 2018-19 MICROWAVE ENGINEERING

Time: 3 Hours Total Marks: 70

Note: 1. Attempt all Sections. If require any missing data; then choose suitably.

SECTION A

1. Attempt all questions in brief.

 $2 \times 7 = 14$

- Differentiate dominant and degenerative mode in waveguide.
- Write any two properties of E-plane tee microwave device. b.
- Define cut-off wave number (kc).show that kc $^2 = \omega^2 \mu \epsilon$ for loss less dielectric. c.
- Define insertion loss? d.
- What are the applications of reflex klystron? e.
- f. How microwave solid state device is different from low frequency devices.
- State the differences between TWT and klystron. g.

SECTION B

2. Attempt any three of the following:

 $7 \times 3 = 21$

- Explain the working principle of IMPATT diode. How does the electric field and hole concentrations varies with the input ac signal.
- b. What is electron transfer mechanism? Explain the operation and working of Gunn diode.
- What is directional coupler? What are the different types of directional coupler? c. Explain the working principle of 2-hole directional coupler. Also determine its S
- d. Explain the construction, working and application of microwave isolators.
- What do you mean by E-plane tee and H-plane tee? Compare their propagation e. characteristics.

Attempt any one part of the following: 3.

- A TE₁₁ mode is propagating through a circular waveguide. The guide is air filled and has a diameter of 12 cm. Calculate: (Given X'11=1.841) (i) Cut off frequency (ii) Guide wavelength for the frequency of 2.5GHz (iii) Wave impedance at 2.5 GHz frequency.
- Why is Magnetron called cross field device? What is meant by π mode operation in (b) Magnetron containing eight cavity resonators? Describe how strapping separates the π mode from other possible modes.

4. Attempt any *one* part of the following:

- Explain Gunn Effect with respect to two valley model. Draw the graph between applied electric field and current density across Gunn diode.
- (b) A rectangular cavity resonator has dimension a=7.5cm, b=4cm and c=16 cm. calculate cut- off wave number and phase constant.

Attempt any one part of the following: 5.

 $7 \times 1 = 7$

- Classify different types of microwave amplifiers and oscillators. Discuss (a) Working principle of avalanche transit time devices.
- What is circulator? Discuss its theory of operation and suggest its applications. (b)

Attempt any one part of the following: 6.

 $7 \times 1 = 7$

- With the help of functional diagram, explain the working principle of two cavity Klystron amplifier. Calculate optimum length of drift space, maximum efficiency, and voltage gain.
- What are the various methods for measuring frequency? Discuss them in details. (b)

7. Attempt any one part of the following:

- Show that the TM_{01} and TM_{10} modes in rectangular waveguide do not exist.
- Discuss method to measure impedance of load. Indicate the use of smith chart in this (b) measurement.
