B.TECH (SEM VII) THEORY EXAMINATION 2021-22 MATHEMATICAL MODELING OF MANUFACTURING PROCESSES

Time: 3 Hours Total Marks: 100

Notes: 1. Attempt all sections. if require any missing data; then choose suitably

SECTION A

Attel	mpt An 02X10=20
a.	Write the causes of residual stresses.
b.	Name the parameters which affect the tool life at most.
c.	What are the modes of heat transfer in welding?
d.	Define heat affected zone in welding.
e.	What are the advantages of additive manufacturing process?
f.	What are the purposes of heat treatment?
g.	What are the principles of plastic processing?
h.	Write the suitable steps for glass manufacturing.
i.	What are Bio-materials?
j.	Define micro casting and micro machining
	SECTION B mpt any 03 parts of the following: 03X10=30
a.	How mathematical modelling is related to problem solving?
b.	How can you classify between conventional and non-conventional machining?
c.	Explain in details about solid state welding and its types.
d.	Define powder metallurgy process and write its application with advantages.
d. e.	and its alloys? SECTION C
e.	What are the fundamentals of heat treatment process and why it has been used for meta and its alloys? SECTION C mpt any 01 part of the following: Explain briefly how a material is plastically deformed and how residual stresses as
e. Atte	What are the fundamentals of heat treatment process and why it has been used for meta and its alloys? SECTION C
4tter (a) (b)	What are the fundamentals of heat treatment process and why it has been used for meta and its alloys? SECTION C mpt any 01 part of the following: Explain briefly how a material is plastically deformed and how residual stresses a removed if it being stored during plastic deformation. Briefly explain sold state phase transformation process and reaction during the transformation.
4tter (a) (b)	What are the fundamentals of heat treatment process and why it has been used for meta and its alloys? SECTION C mpt any 01 part of the following: Explain briefly how a material is plastically deformed and how residual stresses a removed if it being stored during plastic deformation. Briefly explain sold state phase transformation process and reaction during the transformation. mpt any 01 part of the following: 01X10=10 Write the advantages of cutting fluids also explain the different types of cutting fluids material removing process?
e. Atter (a) Atter (a) (b) (b)	What are the fundamentals of heat treatment process and why it has been used for meta and its alloys? SECTION C mpt any 01 part of the following: Explain briefly how a material is plastically deformed and how residual stresses a removed if it being stored during plastic deformation. Briefly explain sold state phase transformation process and reaction during the transformation. mpt any 01 part of the following: 01X10=10 Write the advantages of cutting fluids also explain the different types of cutting fluids material removing process? Explain tool wear and its types using a relevant illustration.
e. Atter (a) Atter (a) (b) (b)	What are the fundamentals of heat treatment process and why it has been used for meta and its alloys? SECTION C mpt any 01 part of the following: Explain briefly how a material is plastically deformed and how residual stresses a removed if it being stored during plastic deformation. Briefly explain sold state phase transformation process and reaction during the transformation. mpt any 01 part of the following: Write the advantages of cutting fluids also explain the different types of cutting fluids material removing process? Explain tool wear and its types using a relevant illustration. mpt any 01 part of the following: 01X10=10
(a) (b) Atten (a) (b) Atten (b) Atten (a)	What are the fundamentals of heat treatment process and why it has been used for meta and its alloys? SECTION C mpt any 01 part of the following: Explain briefly how a material is plastically deformed and how residual stresses a removed if it being stored during plastic deformation. Briefly explain sold state phase transformation process and reaction during the transformation. mpt any 01 part of the following: O1X10=10 Write the advantages of cutting fluids also explain the different types of cutting fluids material removing process? Explain tool wear and its types using a relevant illustration. mpt any 01 part of the following: O1X10=10 What are types of metal forming processes? Briefly explain the mechanics of sheet me forming.
e. Atter (a) (b) Atter (b) Atter (a) (b)	What are the fundamentals of heat treatment process and why it has been used for meta and its alloys? SECTION C mpt any 01 part of the following: Explain briefly how a material is plastically deformed and how residual stresses a removed if it being stored during plastic deformation. Briefly explain sold state phase transformation process and reaction during the transformation. mpt any 01 part of the following: O1X10=10 Write the advantages of cutting fluids also explain the different types of cutting fluids material removing process? Explain tool wear and its types using a relevant illustration. mpt any 01 part of the following: O1X10=10 What are types of metal forming processes? Briefly explain the mechanics of sheet me forming. How does welding affect the microstructure? What are the three zones in a fusion weld?
e. Atter (a) Atter (b) Atter (a) (b) Atter (b) Atter (b)	What are the fundamentals of heat treatment process and why it has been used for meta and its alloys? SECTION C mpt any 01 part of the following: Explain briefly how a material is plastically deformed and how residual stresses a removed if it being stored during plastic deformation. Briefly explain sold state phase transformation process and reaction during the transformation. mpt any 01 part of the following: O1X10=10 Write the advantages of cutting fluids also explain the different types of cutting fluids material removing process? Explain tool wear and its types using a relevant illustration. mpt any 01 part of the following: O1X10=10 What are types of metal forming processes? Briefly explain the mechanics of sheet me forming.
